Intended Use
This reagent is a General Purpose Reagent. For Laboratory Use.
The BOND RNAscope® Protease solution is for enzymatic digestion of formalin-fixed, paraffin-embedded tissue on the BOND automated system. The clinical interpretation of any staining or its absence should be complemented by morphological studies and proper controls and should be evaluated within the context of the patient’s clinical history and other diagnostic tests by a qualified pathologist.

Summary and Explanation
The BOND RNAscope® Protease reagent is used for pretreatment of FFPE (formalin fixed, paraffin-embedded) tissue in conjunction with BOND reagents on the automated BOND-III system. The enzyme pretreatment permeabilizes the tissue and prepares the sample for hybridization with a target RNA specific oligonucleotide probe and subsequent detection using the BOND RNAscope® Detection Reagents.

Reagents Provided
BOND RNAscope® Protease
Total volume = 12 mL, sufficient for 60 tests.

Dilution and Mixing
BOND RNAscope® Protease is ready to use. Reconstitution, mixing, dilution or titration of this reagent is not required.

Materials Required But Not Provided
Refer to “Using BOND Reagents” in your BOND user documentation for a complete list of materials required for specimen treatment and in situ hybridization using the Leica BOND-III system.

Storage and Stability
Store at 2–8 °C. The product is stable under these conditions up to the expiry date indicated on the container label.
There are no obvious signs that could indicate contamination and/or instability.
Return to 2–8 °C immediately after use.
Storage conditions other than those specified above must be verified by the user.

Precautions
• This reagent is a General Purpose Reagent. For laboratory use.

BOND RNAscope® Protease
Contains a mixture of 5-chloro-2-methyl-4-isothiazolin-3-one and 2-methyl-2H-isothiazol-3-one (3:1).
GHS07: Exclamation mark.
Signal words: Warning
H317: May cause an allergic skin reaction.
P261: Avoid breathing dust/fumes/gas/mist/vapours/spray.
P272: Contaminated work clothing should not be allowed out of the workplace.
P280: Wear protective gloves/protective clothing/eye protection/face protection.
P302+352: IF ON SKIN: Wash with plenty of water.
P333+313: If skin irritation or rash occurs: Get medical attention.
P362+364: Take off contaminated clothing and wash it before reuse.
P501: Dispose of contents/container to hazardous or special waste collection point.
• To obtain a copy of the Safety Data Sheet contact your local distributor or regional office of Leica Biosystems, or alternatively, visit the Leica Biosystems’ Web site, www.LeicaBiosystems.com
• Specimens, before and after fixation, and all materials exposed to them, should be handled as if capable of transmitting infection and disposed of with proper precautions. Never pipette reagents by mouth and avoid contacting the skin and mucous membranes with reagents or specimens. If reagents or specimens come in contact with sensitive areas, wash with copious amounts of water. Seek medical advice.
• Consult Federal, State or local regulations for disposal of any potentially toxic components.
• Measures to minimize microbial contamination of reagents need to be taken to prevent the occurrence of non-specific staining.
• Retrieval, incubation times or temperatures other than those specified may give erroneous results. Any such change must be validated by the user.

Instructions for Use
For use of BOND RNAscope® Protease refer to “Dilution and Mixing”.

Product Specific Limitations
The appropriate enzyme concentration and incubation may vary due to variation in tissue fixation and must be determined by the user. Overdigestion of tissue sections may result in loss of tissue morphology. Negative reagent controls should be used when optimizing retrieval conditions.

Troubleshooting
Reference 3 may aid in remedial action.
Contact your local distributor or the regional office of Leica Biosystems to report unusual staining.

Further Information
Further information on in situ hybridization with BOND reagents, under the headings Principle of the Procedure, Materials Required, Specimen Preparation, Quality Control, Assay Verification, Interpretation of Staining, Key to Symbols on Labels, and General Limitations can be found in “Using BOND Reagents” in your BOND user documentation.
